

Software Quality Assurance

Tutorial 3

Activity 1

Task

Draw an **ER diagram** for the following customer requirement:

(This requirement is not of high quality. However, real-life customer requirements may not be as clear as this.)

I want to build system for creating school schedules, there are 2 types of users: schedule manager and teachers. The schedule manager can:

- Add and edit schools.
- Add and edit teachers.
- Add and edit classes for each schools.
- Create and maintain schedules weekly for each school.

In a weekly schedule for a school, the schedule manager can assign available teachers to the class time of the classes in that school. The schedule manager can control the class times.

A teacher can:

- Specify on the system that he/she is busy on certain periods of time. It should allow him/her to tick on the mornings and afternoons of the days. This is for the system to exclude him/her from the list of available teachers at the chosen periods of time.
- View the schedules that concerns him/her.

Activity 2

Task

Analyze the requirement in Activity 1 and draw a **class diagram** from it.

Activity 3

Task

Think of the requirements for a photo sharing site. Then draw an **ER diagram** for it. Let yourself be creative! Think of what's inside Instagram, Imgur, Flickr... for ideas.
